

Four curves determine whether the architecture is balanced

Resident throughput / direct RocksDB

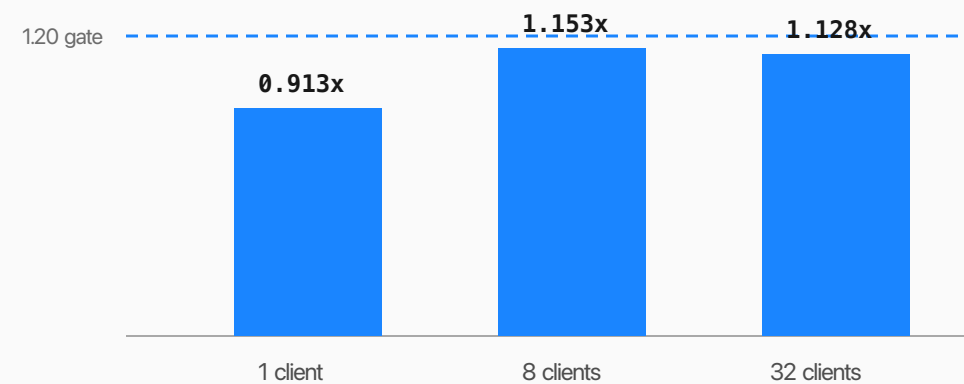

VERIFIED

Median of AB/BA matched-topology ratios. Higher is better.

Resident p99 / direct RocksDB

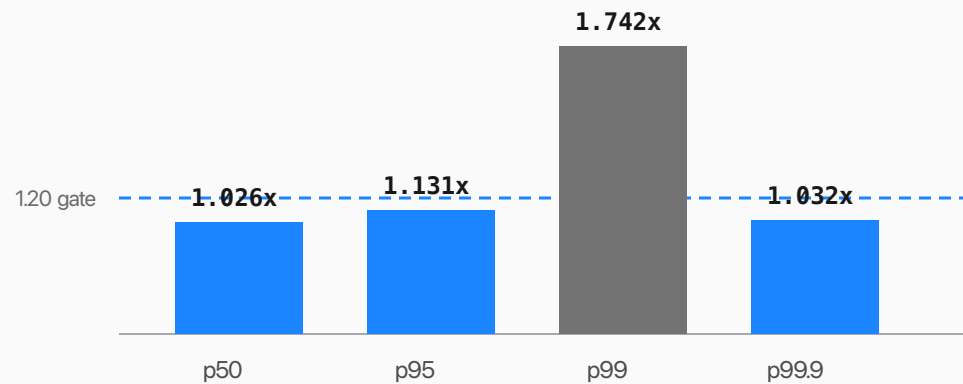

VERIFIED

Lower is better. All admitted points remain below 1.20x.

Cache diagnostic latency / control

EVALUATING

Ten-position diagnostic only. p99 attribution is deferred, not admitted.

C5v2 object geometry / C0

VERIFIED

Real GCS scoped receipts. Full curve verdict remains open.
